Executive Summary

This whitepaper describes how SDAT (SDATokens.com) is going to disrupt and transform the blockchain ecosystem and the cryptocurrency market through ultra-fast and next-gen solutions. SDAT aims to develop a very efficient decentralized exchange and holistic blockchain ecosystem.

SDAT is the world's first Ultra-High-Speed Decentralized Exchange running on SDChain, the robust and state-of-the-art blockchain ecosystem. SDAT Decentralized Exchange has 3 key world-pioneering features: transaction immutability, transparency, and distributed ledger technology. These 3 features enhance transaction security for tokens traded on SDAT Exchange, providing competitive edge and convenience to users. SDAT Exchange aims to work with great companies to exhibit their untapped tokenized values and potential to SDAT Members and allow both investor group and entrepreneur group to join forces in a synergistic way in the upcoming digital economy revolution.

SDAT runs on SDChain. SDChain blockchain is the world's first public blockchain that has truly adopted the blockchain in its true form and spirit to ensure the reliability of the Internet of Things which has turned the IoT (Internet of Things) and the blockchain into a decentralized ecosystem, adopting many industries at the same time to ensure an efficient, low-cost IoT data exchange platform in order to give the data more commercial value, according to their own individual needs.

SDAT is a membership token issued on SDAT Exchange, building an orderly private placement guideline among members, including private placement quota allocation, due diligence period, and many other benefits as detailed on the SDAT membership platform.

With SDAT membership, each member is grouped into their associated level with access to roadshows to discuss with new project teams; the network also automatically utilizes the blockchain info from each member's SDAT tokens held, to fairly allocate private placement quota. SDAT members will also be able to provide projects to the rest of the SDAT membership, for due diligence and sponsorship consideration. SDAT Exchange membership tokens fairly represent each member's privileges for pre-listing private placement quota and due diligence period. Other strategic platform benefits are being planned for future roll-out. The more SDAT tokens you have, the more privileges you receive.

A decentralized exchange is where the exchange does not rely on any third-party services to hold and secure customers' funds but uses peer-to-peer networks to allow users to trade with other users. The introduction of SDAT decentralized exchange is for the reason of ensuring the security of users' funds, thereby allowing them to utilize the trust that lays in the code much like the blockchain itself.

SDAT Alliance created SDAT Decentralized Exchange, leveraging SDChain's next-generation blockchain technology, to achieve ultra-fast 5000 transactions per second (TPS) and confirming transactions within 5 seconds. 30,000 beta users from 150 countries across the world already enjoy the fastest and most user-friendly experience on SDAT Exchange, sharing their journeys in digital economy together in SDAT community. SDAT users enjoy the security of keeping their assets in their own SDAT DEX wallets, guarding their own private keys.

Through the innovative and unique DIYO (Do-It-Yourself-Offering) tokenomics business model, project teams can issue tokens on SDChain and draw on the professional experience of SDAT institutional investor members. SDAT's well-designed project due diligence mechanisms ensure SDAT members get to review rewarding token utility projects and receive fair membership rights as well as on-line private placement roadshow process. SDAT Exchange provides the most powerful project checks for investors to ensure members obtain high-quality investment opportunities. SDAT's goal is to tap the market with the deployment of the innovative, fair, and transparent solutions to satisfy the rapidly growing demand for blockchain services and alternative investment avenues.

SDAT has a sound business model. The potential of revenue and profit from blockchain ecosystem is immense. With the introduction of SDAT token as the cryptocurrency, SDAT will be uniquely positioned to utilize its token in combination with our integrated ecosystem and decentralized exchange to solve the problems hampering the blockchain ecosystem and cryptocurrency market. The SDAT token will function as currency in SDAT's blockchain ecosystem as well as cryptocurrency market. SDAT tokens would be used to avail blockchain-based services.

The SDAT ICO Public Sale will start in Q3 2019 and last until 4 rounds or until our fundraising goal is reached. Awesome crowdsale discounts would be available during the ICO. Out of the total supply of the 2 billion SDAT tokens, the supply in circulation for investors would be 600 million tokens or 30% of the total tokens.

SDAT has an excellent financial plan and strategy. The SDAT team comprises of highly experienced and qualified professionals. The management has great depth and breadth of exposure and hands-on experience across various domains such as blockchain, cryptocurrency, real estate, venture capital investments, technology, finance and marketing.

Market Overview

The blockchain and cryptocurrency market is rapidly growing in the world. There are a number of emerging trends shaping this industry in favor of the ultra-fast and high-security options.

The blockchain and cryptocurrency industry shows the following trends:

- The global outreach of blockchain technology and cryptocurrencies
- High level of volatility in the cryptocurrency prices
- Slow adoption of blockchain technology by traditional industries
- Lack of full understanding of blockchain and cryptocurrency among the general public
- Negative trends like frauds, hacking incidents, etc.
- Technological and innovative advancements

IDC has estimated global blockchain industry growth with 5-year compound CAGR of 73.2% up to 2022.

The plans for adoption of blockchain and cryptocurrency by reputed corporations have given a fillip to the blockchain ecosystem, e.g., Facebook has announced its plans to introduce Libra worldwide with due approvals from the public authorities. Blockchain ecosystem has become huge at present. In the recent times, the average daily volume of cryptocurrency transactions in the market has been hovering around 50 billion USD.

This clearly underscores the great potential of the cryptocurrency and decentralized exchange business. An effective and efficient exchange such as SDAT Exchange can garner a significant share of this market with state-of-the-art security, user-friendliness, and innovative features.

SDAT has perceived a number of problems in the blockchain industry as it exists and functions at present as well as in the cryptocurrency market. The present problems require some innovative solutions with out-of-the-box thinking. SDAT plans to tap these market trends and opportunities to ensure great success in its operations and future expansion.

Problems & Challenges

The cryptocurrency market and blockchain technologies are ever evolving at an accelerated pace. The technology has evolved with continuous innovation from the prototype traditional exchanges to the centralized exchanges, and further to the latest decentralized exchanges, making trading comparatively more secure and convenient. Still there are many issues and problems that are afflicting the users and the cryptocurrency markets, hampering the wider adoption of the cryptocurrencies and blockchain. In fact, despite the cryptocurrency boom in recent years, there is a limited spread in the reach of the cryptocurrency and blockchain in terms of the common masses due to complex technicalities and time consuming processes.

A centralized exchange is the hallmark practice of the traditional financial world. The same practice found its way in to the blockchain world, mainly due to dominance in the financial centers and sense of familiarity among the business leaders. However, it is not much compatible to the blockchain and cryptocurrency market, leading to inefficiencies and difficulties. A centralized exchange basically conducts trade off-chain through a separate private database, leading to various operational risks.

The concept of decentralization is theoretically a better alternative that effectively overcomes the problems associated with the traditional and centralized exchanges. A decentralized exchange essentially involves peer-to-peer trade, eliminating the need of a third party or intermediary. This removes various risks such as hacking and counterparty risk that afflict the centralized exchanges. A decentralized exchange offers an efficient marketplace that facilitates conducting of a trade directly between the traders, based on a blockchain or a distributed ledger and automated processes. This reduces a number of risks like market price manipulation, tampering of funds, fraud, etc. However, the existing decentralized exchanges based on incremental improvements haven't overcome all the problems and negatives of the centralized exchange system. Traders still face a number of difficulties or issues in conducting trades on the existing decentralized exchanges.

Decentralized exchanges with on-chain settlement and effective processes are currently becoming popular as they remove the serious shortcomings of a centralized exchange, such as, lack of transparency, a requirement for trust, and being soft targets for hacking. A decentralized exchange doesn't require the users or traders to trust anyone with the control of their valuable assets and requires giving limited control only to on-chain order requests, avoiding counter-party risk.

Current Shortcomings Of Centralized Exchanges

Security

Breaking news of computer hacks on centralized exchanges occur nearly every month. Billions of dollars have already been stolen.

Disputes Of Physical Token Assets Ownership

As users deposit funds into centralized exchanges, the physical token assets become properties owned by centralized exchanges, with withdrawal claiming rights given to users; if an exchange were to halt withdrawal or cease its operation, users have no way to claim back their physical token assets.

Market Manipulation Through Fake Transactions

Already deemed as a necessary evil to provide liquidity to trading, centralized exchanges and market makers can manipulate token pricing and volume easily.

Shortcomings Of Other Decentralized Exchanges

High Latency & Network Costs

Very slow to transact, due to other blockchain Mainnets' confirmation speed and their ability to handle their transactions per second (tps).

Low Volume & Liquidity

As trades are shown transparently, it is difficult for market makers and exchanges to create fake transactions that are costly on-chain, so while orders are real, they reflect real trading volume and liquidity.

User Experience

A few DEXs previously built their solutions that needed to enhance UX design more – causing many users to shy from using DEX.

Decentralized Transactions Among Different Blockchains Are Difficult

While not impossible to solve, unless the DEX operator has Mainnet building expertise, it is rather hard for a DEX operator to create an integrated platform with cross-chain gateway solution.

Industry-wide Challenges

SDAT Alliance has perceived a number of other problems in the blockchain ecosystem for which the Alliance will attempt to solve through SDAT Exchange

- Slow adoption of the latest and emerging technologies in the blockchain ecosystem and cryptocurrency market, particularly in the traditional brick and mortar enterprises.
- Lack of integrated and smooth transaction facilities for the cryptocurrency market participants and institutional investors.
- Lack of cost-effective, fast, and efficient funding platform.
- The cryptocurrency market is seeing the influx of many non-serious companies and persons launching the ICO crowdsale without a sound business model, deficient tokenomics/token valuation, and no visible cash flows. Many speculators enter cryptocurrency market for raising funds for unviable projects.
- Many institutional investors consider cryptocurrencies and ICO crowdsale as speculative financial instruments.

Solution

Integrating Business & Technology

The present problems afflicting the blockchain ecosystem and cryptocurrency market require some innovative solutions with out-of-the-box thinking. This has spurred SDAT to take some visionary steps to improve the blockchain ecosystem and the cryptocurrency market to provide and receive services in a smooth, integrated, and cost-effective manner. These problems would be addressed and resolved by SDAT with innovative solutions and pragmatic business model.

Our integrated solution provides the following benefits to the users

Simplicity

SDAT offers a very simple interface for users who wish to trade their tokens on the exchange. With few steps which include just creating a wallet, users can start using the exchange for their trading activities.

Safety

SDAT Decentralized Exchange does not store your assets; your wallet does. Users are left in control of their funds and personal data. Everyone is the sole person in charge of their portfolio, as Satoshi Nakamoto imagined it at the beginning by creating the Bitcoin protocol.

Openness

Transactions on SDAT are open to the public and traceable on the SDChain Blockchain. This ensures immutability and transparency, which is the aim of blockchain and decentralization.

Low Transaction Fee

SDAT offers almost free transaction fee on the platform, each transaction, no matter how large, only costs 0.0001 SDA gas fee which is somewhere about \$0.0000002 per transaction, at today's rate.

Speed

Transactions on the SDAT platform leverages SDChain's world class blockchain technology. All transactions are completed within roughly 3-5 seconds.

Convenience

The users can deposit and withdraw anytime in a smooth and hassle-free manner. They can transact in real-time with ultra-fast speed and in a highly secure way.

Value

SDAT members jointly search, incubate and list valuable brick and mortar DIYO (“Do-It-Yourself-Offering”) projects that have clear tokenomics and applications.

Institutional Investor Alliance

SDAT Institutional Investor Alliance is the cornerstone of our exchange's deal sourcing and capital sponsorship.

Shared Trading Depth

Soon to allow other exchange partners to license SDAT DEX Suite, to share trading depth together!

Business

Why Choose SDAT Exchange?

One Stop Service

We can guide a DIYO issuer from token issuance, tokenomics design, PR, SDAT community promotions, private placement and ICO services, exchange listing, implementing your own co-chain blockchain, to developing your DApp platform. We are one of the only organizations on this planet that can provide you with one single contact window to get all of the work done.

Community Promotions

With a fast growing exposure base of hundreds of thousands crypto asset enthusiasts, we get your project in front of new sponsors all over the world.

Professional Project Gallery

Our members will get to see your projects professionally presented on our exchange with clear tokenomics models that members can easily understand and appreciate the values of your project.

Global Media Footprint

Get your project promoted through professional media partners across Asia, Oceania, Europe, Africa, North and Latin America.

SDAT Member Community

SDAT members are actively seeking to sponsor great projects through private placement. We get you in front of sponsors that want you to succeed.

Exclusive Interviews

We provide interview opportunities for you to discuss your tokenomics and business models that highlight your key strengths and unique value propositions.

Why Become An SDAT Member?

- ✓ SDAT Members can bring projects to rest of the Alliance, allowing co-investment on SDAT's exclusive member-only platform.
- ✓ SDAT builds an orderly private placement process, utilizing SDAT token as the medium to fairly disseminate investment quota to members and allow members to have appropriate access to roadshows and due diligence.
- ✓ SDAT serves to guide traditional VCPE institutions and high net worth individuals into the blockchain industry.
- ✓ With on-chain trades, the decentralized exchange orderbook is fully transparent, protecting investors' interests.

Technology: How does SDA enable SDAT's blockchain technology and ecosystem

SDChain, based on ISO IoT Six-Domain Model standards, develops and commercializes IoT blockchain technology. SDChain launched SDChain Mainnet 1.0 in August 2018, with real-world 5000 tps, 3-5 second transaction confirmation speed, and one of the industry's most cost-efficient gas fee plans for users. SDAT Exchange runs on SDChain Mainnet.

SDA is the primary platform coin for the entire SDChain blockchain network, which is used for: wallet account opening fee of 0.6 SDA, token credit of 0.2 SDA per token, and transaction confirmation fee (gas) of 0.0001 SDA, and accordingly, SDAT Exchange's transaction fee. SDA's most popular commercial applications include: token issuance, Co-Chain staking, SDAT decentralized exchange transaction fee, Battle Camp community staking, Supply Line crowdfunding sponsorships, and IoT device wallet activation fees and data transaction gas fees.

Why Issue Tokens On Sdchain (SDA)?

- Fast: 3 - 5 second transaction confirmation.
- Low-Cost Transaction Fee: 1 ten-thousandth SDA per transaction.
- Global standard: based on globally adopted ISO IoT-Six Domain Model
- Access to global airdrop marketing and project broadcast platform with SDAT- FREE community
- Access to integrated Supply Line crowdfunding platform
- Fully secure token - save costs on paying \$50K USD+ to certify your token's smart contract for exchange listing
- Access to SDAT Members' pre-listing Private Placement fundraising platform (Available in Q4 2019)

Cross-Chain Gateway: SUSDT Private Placement and Payment Stablecoin

SUSDT anchors 1:1 USDT as a stablecoin, operating on SDAT Exchange for funding and payment convenience. Users can easily trade in their SUSDT for USDT and vice versa in SDAT's Cross-Chain Gateway.

Tokenomics

Due to the ever-expanding growth in demand for blockchain technologies and cryptocurrencies, SDAT aims to cater to the market with a highly futuristic ecosystem, powered with latest technologies. We plan SDAT ICO to fund this venture, as we will also guide other entrepreneurs on SDAT Exchange ecosystem to do the same. SDAT tokens are used to run the SDAT ecosystem. A portion of the minted SDAT tokens will be sold to the SDAT community in a public sale. SDAT is a membership token issued on SDAT Exchange, building an orderly private placement guideline among members, including private placement quota allocation, due diligence period, and many other benefits as detailed on the SDAT membership platform.

With SDAT membership, each member is grouped into their associated level with access to roadshows to discuss with new project teams; the network also automatically utilizes the blockchain info from each member's SDAT tokens held, to fairly allocate private placement quota. SDAT members will also be able to provide projects to the rest of the SDAT membership, for due diligence and sponsorship consideration. SDAT Exchange membership tokens fairly represent each member's privileges for pre-listing private placement quota and due diligence period. Other strategic platform benefits are being planned for future roll-out. The more SDAT tokens you have, the more privileges you receive.

SDAT token is designed to address the needs of investors by combining the privileges associated with digital investor membership and the token's associated platform utility rights. SDAT has a strong business model fostering ecosystem growth with steady and visible future cash flows and profits, to sustain its operation for members. In the long term, SDAT token would be further developed and adopted by partners for 3rd party developer ecosystem utility, through our Developer Ecosystem Release in Q3 2020.

SDAT token aims to function as a convenient digital currency with limited amounts of speculative trading due to an intrinsic value derived from its steady membership rights exercisable on the SDAT Exchange platform and 3rd party platforms. Therefore, SDAT token is much less likely to be subject to the same degree of price volatility which characterizes other coins/tokens in the cryptocurrency market.

SDAT token will be sold in 4 rounds, starting with Q3 2019 as the first round, matching quarterly platform development roadmap. We want sponsors to rest assured that we are keeping up with development work, prior to receiving further funding for subsequent rounds.

Token Allocation

2 Billion SDAT Total Allocation

Token Allocation - Number of SDAT	
Total Tokens	2,000,000,000
ICO Round-1	60,000,000
ICO Round-2	120,000,000
ICO Round-3	180,000,000
ICO Round-4	240,000,000
Exchange Listing	20,000,000
Community Building	200,000,000
Partnerships	200,000,000
Legal Advisors	40,000,000
Employees & Contributors	300,000,000
Reserve	640,000,000

Product Roadmap

**2019
Q3**

Foundation Release

Already released ahead of schedule on June 20, 2019, SDAT Membership Level System enables users to see their membership level, browse Projects Gallery, view My Assets online, conduct real-time on-chain trading, participate in the FREE Airdrop community programs, and exchange USDT for SUSDT for on-chain trading. The market adoption results are phenomenal: we have a fast growing base of over 30,000 beta users from 150 countries that joined us in 6 weeks upon DEX launch!

Clubhouse Release

SDAT Clubhouse is the private placement module that enables SDAT token holders to fairly receive investment quota allocations and due diligence period, based on SDAT Membership Level System. The 2019Q4 Clubhouse Release will allow DIYO project issuers to pitch private placement projects for SDAT members to vote, sponsor and refer.

**2019
Q4**

**2020
Q1**

Real Estate STO System Release

SDAT Real Estate STO System Release is one of the first real estate STO investment modules available on the planet, allowing real estate developers and funds to issue real estate STOs legally to global investors, subject to local compliance.

**2020
Q2**

Cross-Chain & Fiat Gateway Release

SDAT Cross-Chain & Fiat Gateway Release is the combination of cross-chain cryptocurrency gateway and fiat currency OTC platform, that enables users to conduct peer-to-peer exchange for non-SD Chain cryptocurrencies and fiat currencies.

**2020
Q3**

Developer Ecosystem Release

SDAT Exchange will launch its own independent 5000 tps blockchain Mainnet, leveraging SDChain's co-chain technology, to make APIs and SDKs available for traders, partner exchanges and developers to utilize SDAT's core features. Traders may use trading APIs for daily trades, while partner exchange operators may license SDAT DEX core engine as a white label solution as an add-on to their existing exchange platform. Developers will have technical resource guides on using SDAT DEX to build payment gateways, wallets, IoT data exchange solutions and many more rewarding project ideas.

Marketing Plan

There are 5 pillars to SDAT Exchange's marketing strategies

01

We want our users to be our best platform promoters through word-of-mouth. We go out of our way to take care of each user on our platform. SDAT Community Advocates are highly trained community admins that foster user discussions and answer group questions across 10 of our SDAT Telegram groups. With new users joining every day, they are answered by talented and friendly community advocates with questions. [Please visit SDAT Telegram channels]

02

FREE token is an airdrop holder token, running on SDAT Exchange, that has a referral program that brings users from 150 countries all over the world to explore SDAT Exchange's features. The user base continues to grow, as community members make their own videos and promotional content to help us spread the word.

03

SDAT Exchange produces creative and simple-to-understand viral videos and content that allow users to grow to love SDAT Exchange. We take great care in making our content easily understandable by as many people as possible, making what would have been complex to explain, easily digestible in simple animation videos. [Please visit SDAT Youtube Channel]

04

SDAT Exchange creates marketing awareness at both traditional technology media and blockchain media. From East to West, we have decades of PR experience with magazines, online media outlets, TV stations and other social network KOLs. We intend to bring SDAT Exchange to the wider audience, beyond the cryptocurrency world.

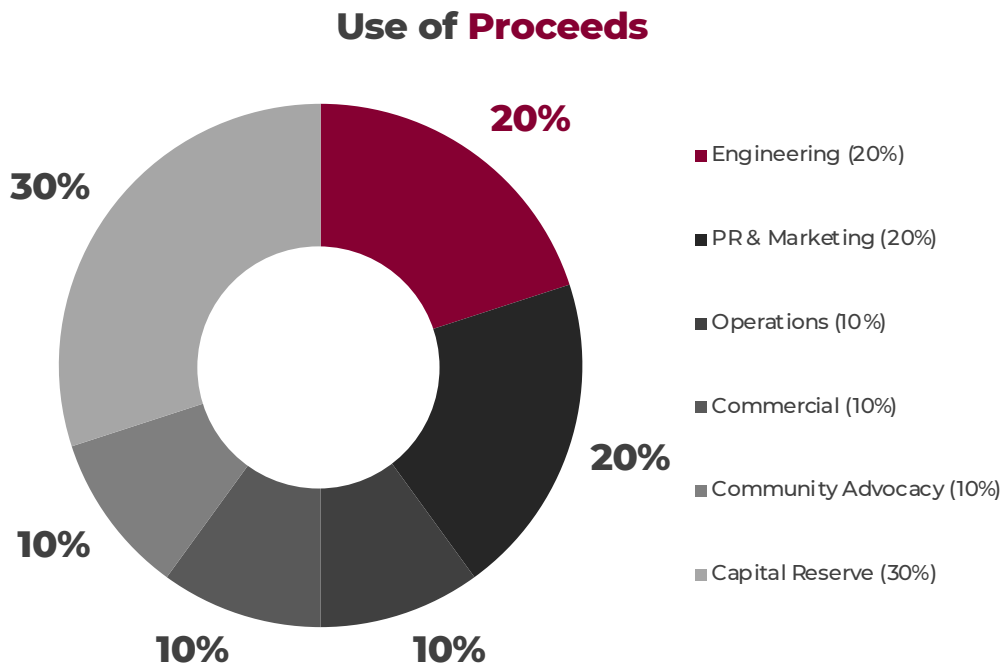

05

SDAT Exchange leverages partnership relationships with other associations and communities to get exposure. We offer partnership opportunities to work with existing communities, as well as associations of traditional industries: VCs, tech industries and financial associations.

Financial Plan

SDAT has a disciplined yet flexible financial plan as a part of the overall strategy. In its operations, SDAT will focus on the bottom-line from the very beginning to achieve profitable and sustainable growth. We understand fully that ICO fundraising has many uncertainties and risks for sponsors and for our project team. To reduce risks for sponsors, SDAT has set up quarterly roadmap deliveries based on our Product Roadmap, so that the community can double-check our promises, prior to winning the community's trust to receive more resources.

On the other hand, given the risks of cryptocurrency market fluctuations affecting the success of each of 4 ICO rounds, SDAT's project budgeting method is flexibly designed to execute the project based on resources raised. This ensures that we are disciplined with our spending, calibrated every quarter.

- Engineering: the core of SDAT engineering, development and maintenance.
- PR & Marketing: advertisement and promotional expenses.
- Operations: administrative, legal, accounting, government and banking expenditures.
- Commercial: Sales and business development activities with partners and clients.
- Community Advocacy: SDAT membership and community customer service.
- Capital Reserve: Funding reserve to ensure continuation of the project as well as strategic investments into projects outside of the 5 routine categories above.

Operational Break-Even-Point

With service income from various product release modules, we expect that SDAT will reach operational BEP on a quarterly basis in Q3 2020. SDAT will then start listing on SDAT Exchange and multiple partner exchanges in Q4 2020.

Our Team

The SDAT team comprises of highly experienced and qualified professionals. The management has a great depth and breadth of exposure and hands-on experience across various domains such as blockchain, cryptocurrency, technology, marketing, finance and investments.

David Liao

SDAT Alliance Secretary General

Mr. Liao has 20 years of experience in fund management, investment, real estate, and marketing. He currently volunteers as the Secretary General of Financial Executives Institute.

David Pan

SDAT Alliance Chief Economist

Mr. Pan has over 20 years of industry experience serving companies in IoT, semiconductor, software, electronics manufacturing and telecom sectors. Mr. Pan currently serves as SDChain Alliance CEO, Taiwan IoT Association Blockchain Alliance Director, Chinese Blockchain Association Executive Director, and Berkeley Taiwan Club Director. Prior to SDChain, David served as the Director of IoT Asia Marketing at Arm– Softbank. David graduated from Harvard with a Masters in Finance, Golden Gate with Masters in Enterprise Systems, and UC Berkeley with BA in Architecture.

Enzo Lin

SDAT Alliance Head of Community

Mr. Lin manages SDAT's community growth with over 10 years of previous experience as a private banker to help families with wealth management.

Charles Pringle

Head of PR& Marketing

Mr. Pringle comes to SDAT Alliance with 30 years of media PR expertise, as well as 2 years of blockchain media experience. Fluent in English, Japanese, German, Mr. Pringle manages SDAT Exchange's global media relationships.

Brian Chen

Commercial Manager

Mr. Chen comes to SDAT Alliance to consult project teams on prelisting and post-listing strategies. Mr. Chen was previously the CEO of Super Coin Exchange.

Rasel Mahmud

Frontend Web Contributor

Mr. Mahmud serves as the frontend web contributor for SDAT Exchange.

Jen Belen

Community Advocate

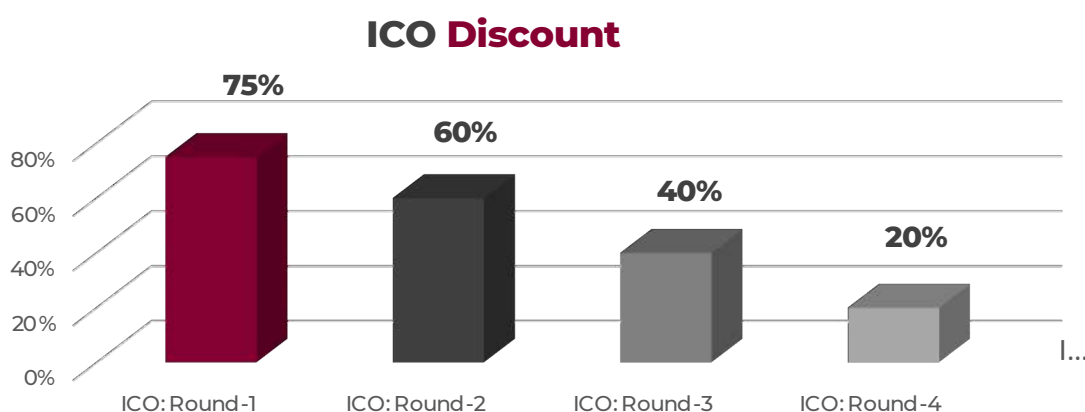

Ms. Belen assists community members with questions related to SDAT operations.

Offering

The SDAT ICO public sale will start in Q3 2019 which will launch a new round each quarter for a total of 4 quarterly rounds, with associated discounts. Sponsors may review previous quarter's development work, prior to sponsoring more SDAT with their funds.

ICO Stage	Time	Allocation (%)	SDAT (Number)	ICO Discount	Price (USDT)	Hardcap \$	Softcap \$
Round-1	2019Q3	3%	60,000,000	75%	0.05	3,000,000	750,000
Round-2	2019Q4	6%	120,000,000	60%	0.08	9,600,000	2,400,000
Round-3	2020Q1	9%	180,000,000	40%	0.12	21,600,000	5,400,000
Round-4	2020Q2	12%	240,000,000	20%	0.16	38,400,000	9,600,000
Listing	2020Q4	1%	20,000,000	0%	0.20	4,000,000	-

We would provide a generous crowdsale discount to the common investors and users. It would encourage the investors to buy the maximum amount of the SDAT tokens they can afford. The crowdsale discount during the ICO Public sale would be as shown below:

Each token holder would be expected to receive a share in the various benefits related to SDAT ecosystem in the future. The individual share depends on the number of SDAT tokens held by the individual investors. In addition to the likely appreciation in the value of the SDAT token, the token holder may also expect to receive privileges from platform utility.

Legal Disclaimer: SDAT token is not an STO, and it will not offer any rights to profits, dividends or other rights guaranteeing revenue of SDAT Exchange. This document is not meant to be for token sale solicitation and is intended for target audience only.
